It's all about people. Let's design products they love.

Data Engineer (f/m/d)

📍 Valencia   ◐ Full-time employee   🪧 Professional/Experienced

💳 42 - 60 K   Ƙ 4,4

Your tasks:

- Work in a team with Data Engineers and Data Scientists to contribute to the (technical) design, implementation and evaluation of new algorithms, machine learning models and other data-driven features and services.

- Take ownership of legacy services, optimise and transform them to current needs.

- Design and implement components in a sustainable fashion (e.g. having on observability, computational costs, ease of use, future maintenance costs)

- Build, deploy, monitor and operate services within our infrastructure, while automating processes.

- Use technologies like Scala, Python, Kafka, Kubernetes, snowflake, DBT, Spark and AWS.

- Bridge and operate between on-prem and cloud infrastructure.

Your skills:

- BSc or higher degree in Computer Science or equivalent Software Engineering experience
- Very good programming skills in Scala, Python, snowflake and experience in deploying and configuring on AWS.

- Knowledge and experience in implementing scalable software and services which process large volume of data (e.g. real-time processing components, REST services), using search technologies (e.g. VectorDB, opensearch, etc.), data storage (e.g. relational databases, key-value stores, snowflake) and related data processing technologies (e.g. Kafka, Akka, Play, etc.)
- Good knowledge in SQL
- Proficient English language skills (German is not required)
- **Nice to have**
  - Experience in working with Graph and Vector databases
  - Experience in designing architectures and developing software components for distributed systems (e.g. in the context of micro-service architectures)
  - Experience in building libraries, frameworks or platform services that other Software Engineers use
  - Good knowledge in DBT
