## Data Engineer (m/f/x)

Hamburg

Full-time  
employee

Professional/Experienced

65 - 85 K

4,1

Apply

### Your tasks:

- **Architect Cloud Solutions:** Lead the transition to a cloud-based data platform, innovating beyond our existing on-premise solutions.
- **Build & Engineer:** Enable seamless migration and optimization of data flows using cutting-edge tools like Kafka, AWS S3, Snowflake, and Airflow.
- **Champion Data Governance:** Establish rigorous data governance practices to ensure data integrity and regulatory compliance.
- **Collaborate Across Teams:** Work with data scientists, business analysts, and IT staff within our vibrant data community to continuously advance our tech prowess.
- **Secure Performance:** Develop a scalable, highly available data infrastructure with a keen focus on performance.
- **Optimize Costs:** Manage infrastructure

costs effectively while maintaining system excellence and reliability.

## Your skills:

- **Proven Experience:** 5+ years in software or data engineering, with significant expertise in building resilient data systems.
- **Technical Mastery:** Proficiency in Python (or Java), SQL, and a good understanding of cloud services architecture, with focus on AWS and Snowflake scalability and resilience.
- **Hands-On Expertise:** In-depth experience with cloud-based data warehousing, especially Snowflake, and transformation frameworks like DBT. Real-time data streaming knowledge, including Kafka.
- **Migration Expertise:** Demonstrable success in moving complex data workflows to the cloud. Skilled in transforming Spark-based processes in Scala to run efficiently on Snowflake using Snowpark, or in re-engineering them into DBT jobs.
- **Governance Acumen:** Solid command of data governance, encompassing data quality, cataloging, lineage, and compliance adherence.
- **Team Synergy:** A team player eager to learn, share knowledge, and excel in English communication across the organization.
